

JEWEL DROP DOCUMENTATION:

Import Plugins:

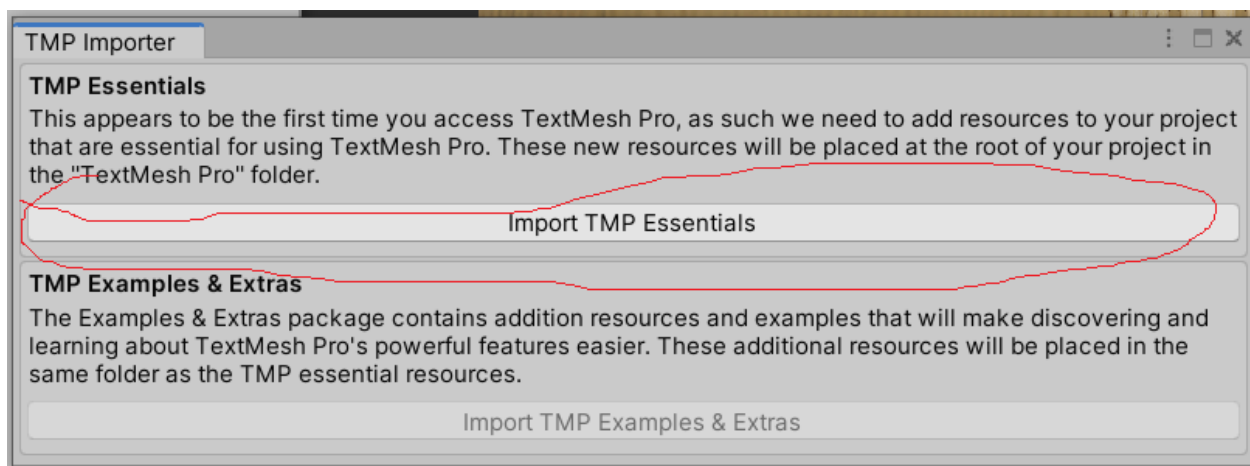

Google Mobile Ads (admob):

Download and run it: <https://github.com/googleads/googleads-mobileunity/releases>

LeanTween:

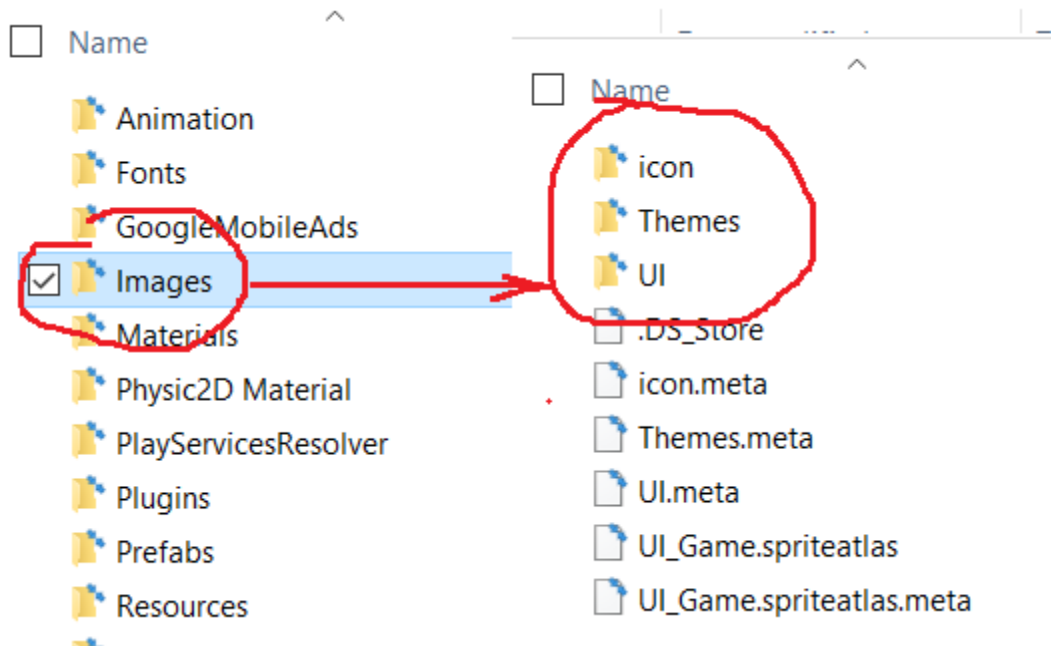

Download and import : <https://assetstore.unity.com/packages/tools/animation/leantween3595>

Import Textmesh Pro: when click Game scene it will show window TMP Importer, click Import TMP Essentials (if this place button disable you need to delete TestMesh Pro folder before click Play scene)

How to reskin:

Replace all file .png in Images folders (NayvySoftDropJewel-> Images->UI/Icon/Themes)

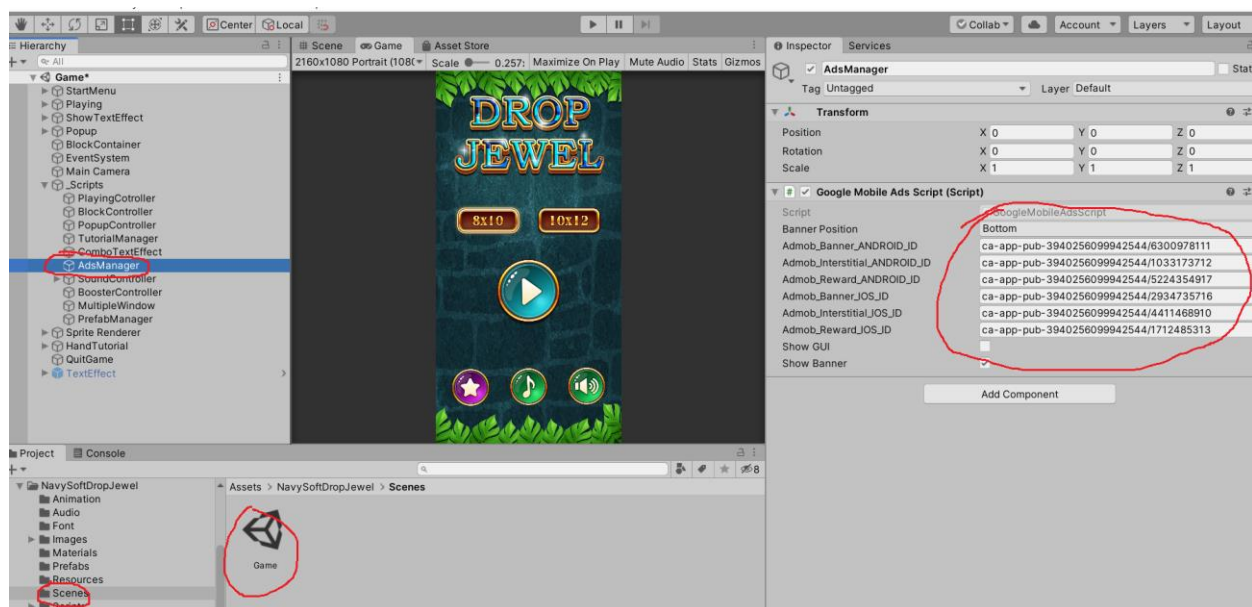

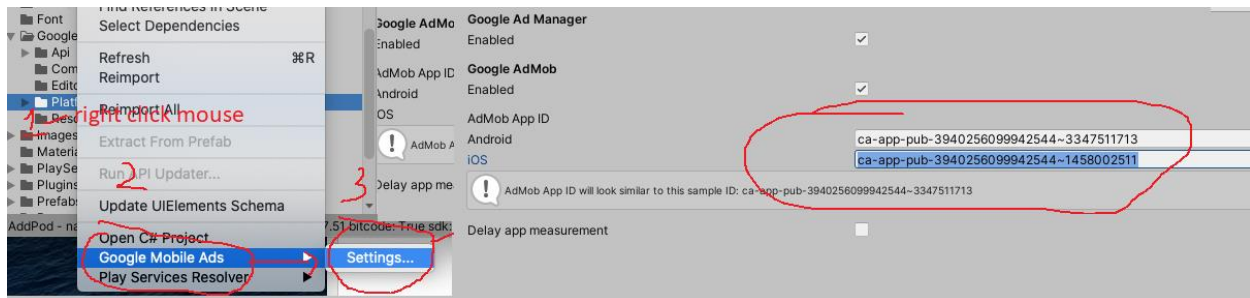

1.Change admob key:

Click left mouse Scenes-> double click Game Scene

Left click _Scripts->AdsManager --> change admob keys

Change admob app id : right click in Assets --> Google Mobile Ads -> Settings....-->replace with your admob app id

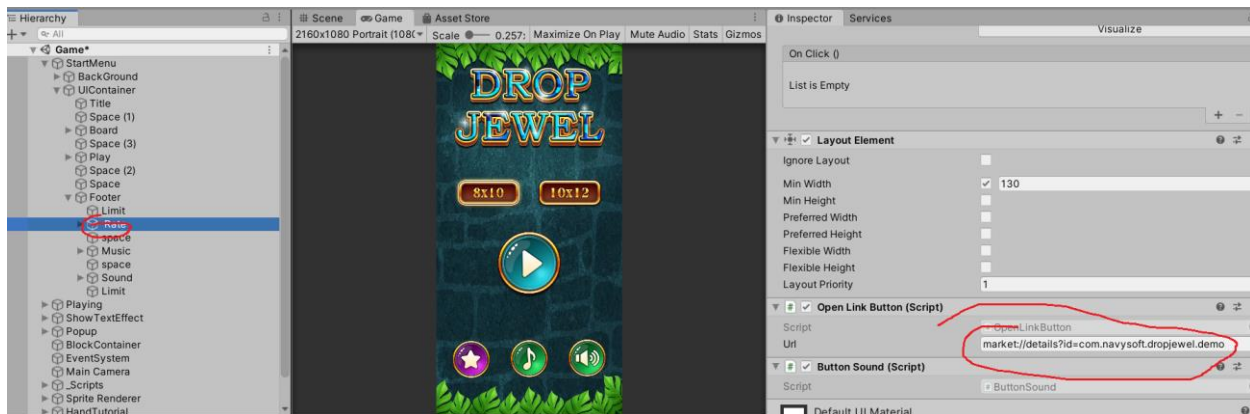

Use your admob key replace at here:

(if you don't know create admob key how do please contact us. We will support)

2.Change link rate: left click StartMenu → UIContainer →Rate and change it

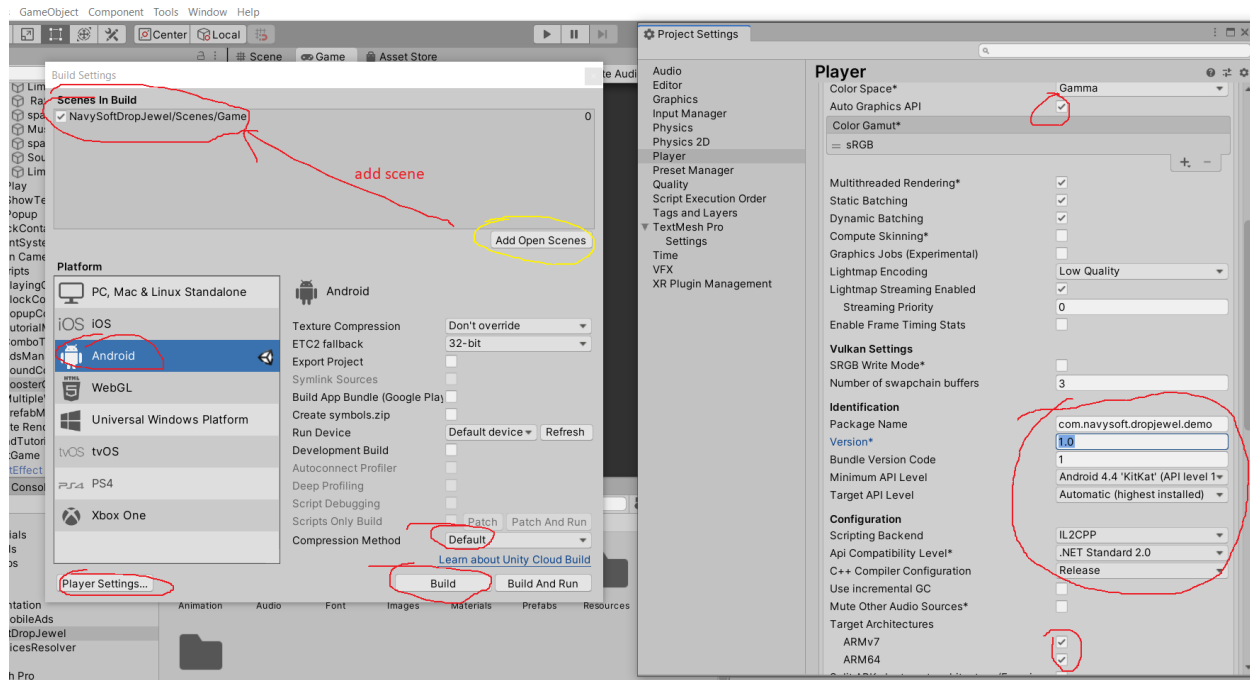

If google play: market://details?id=[package name]

iOS: <https://apps.apple.com/app/id114> app create in your apple store]

4.How to build for Android:

Choose File in left top window -->Build Settings--> Android -> Playing Settings--> replace your Package Name in Other Settings tab

Remember choose scene before build (under picture)

After click Build

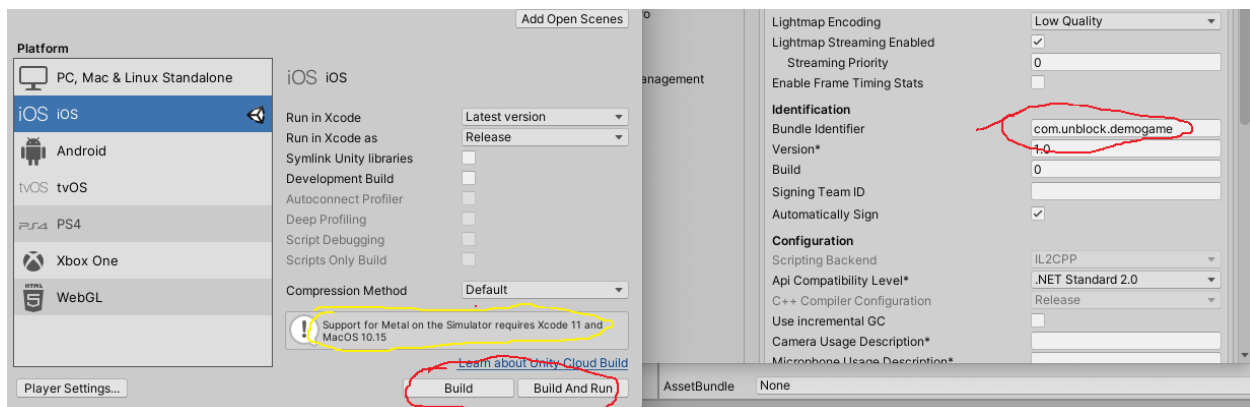

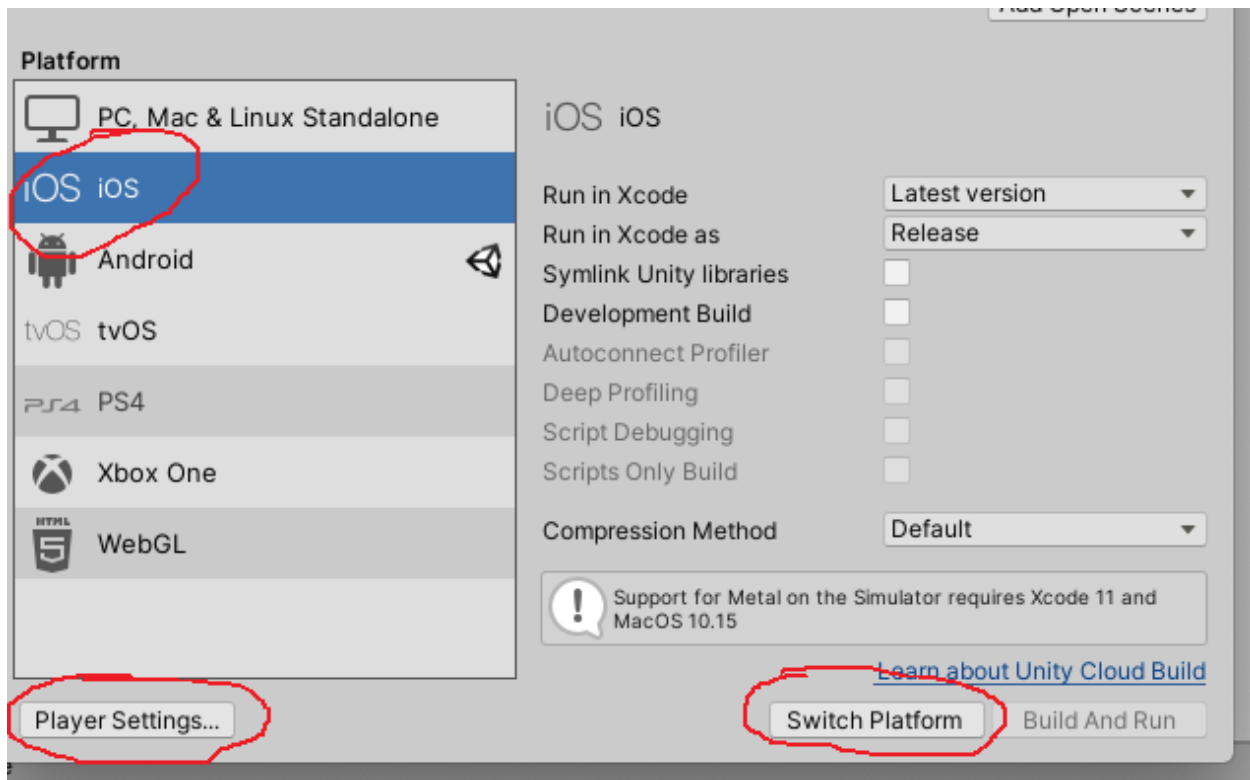

If have **SDK** issues please Force Resolve (right click Assets -> Play Services Resolver->android Resolver -> Force Resolve) after Play Game before Build

5.How to build for iOS:

File--> Build Settings-> iOS-> Switch Platform->Playing Settings

Change your Bundle Identifier and Build It with Build button or Build and Run

(you need MacOS 10.15 and Xcode 11 minimum)

If you can't build or have any issues please contact us. We will respond as soon as possible. Normal 15 - 30 minutes after receiving your message
